

## **ABSTRACT OF THE DISCLOSURE**

The present invention discloses an apparatus and method for controlling a disc player. The disc player comprises at least one optical drive and a card reader. Image files output by the card reader are transferred to video signals and showed on TV screen for editing. Furthermore, the disclosed disc player has a function of time division multiplexing. When disc player is operating in a soundless operation mode and there is a music disc loaded in the optical drive, the disc player will play the music disc at the same time. In this way, the user can listen to the music by using a music disc loaded into the optical drive when the disc player is operated in the soundless operation mode.
